

FEDERAL AI / DIRECT-TO

Mission request in. Verified outcome out.

Direct-To is a secure operator surface for mission workflows that span fragmented systems, sensitive data, disconnected environments, and consequential decisions. It coordinates approved intelligence and tools, pauses at named control points, and attaches evidence to the outcome.

THE OPERATOR CONTRACT

- **Workflow-first.** Direct-To productizes a recurring mission workflow and delivers a release-ready artifact — not a chat window.
- **Approval-held.** Consequential actions pause for the named mission authority. Reject publishes nothing.
- **Evidence-backed.** Authoritative sources first; every brief and decision carries its trail.
- **Air-gap ready.** Local by default, read-only by default. Built for enclaves where the internet is not an option.

MISSION SKILLS

- Versioned workflow packages, delivered per engagement:
- Mission Readiness Brief — NiFi · SIEM · SQL sources reconciled into one governed readiness picture.
 - Sudo Detection Builder — control objective in, reviewed detection rules and deployment package out.
 - Custom workflows scoped in the Sprint — if it recurs and it matters, it can be productized.

HOW A WORKFLOW BECOMES A PRODUCT

01 Assign

Mission named, owner named, acceptance test written first.

02 Ingest

Approved sources connected; provenance recorded.

03 Reconcile

Conflicting records normalized against authoritative systems.

04 Hold

Draft outcome pauses at the control point for human authority.

05 Release

Approved artifact ships with its evidence attached.

PUBLIC OFFER — MISSION WORKFLOW SPRINT

\$70K · 90 days · one workflow operational

Fixed scope: your highest-value recurring workflow, productized under the operator contract above, running in your environment with your controls. Acceptance test agreed before work begins. Expansion tiers scoped after the first workflow proves out.

RELEASE BOUNDARY

Nothing is published without approval by the named mission authority. Demonstrations run on synthetic data and are labeled simulated. Public materials contain no customer data and imply no government endorsement.
